

See the Latest in Night Vision and Infrared Imaging Technology

April 7-10, 2014 Booth #C12223  
at the Las Vegas Convention Center  
Las Vegas, Nevada USA

See the latest at NAB including AstroScope Night Vision Modules that enable dSLR camera and ENG/HD camcorders to video record in ultra-low light (green image sequences). Also, see our infrared cameras for thermal imaging special effects and TV reality and sports programming.

See Our Products!

AstroScope Night Vision for dSLR Cameras

AstroScope Night Vision now available for the Canon C100/300/500 and the Nikon D4/3X

See if we offer Night Vision for your camera ▶

AstroScope Night Vision converts digital SLR cameras into high-performance night vision imaging systems. AstroScope helps the photographer capture high resolution images at night and in low-light too dark for un-intensified cameras. The AstroScope fits seamlessly between the camera and lens allowing photographers to use the camera and lens features such as image stabilization while delivering awesome night-time green images.

AstroScope Night Vision for High Definition Video

With AstroScope Night Vision, portable camcorders can produce high-quality night vision video in low-light. Specifically designed AstroScope modules are available for popular Sony®, Panasonic®, Canon® and JVC® high-definition camcorder models and produce high-quality, high resolution night-time video.
